PROFILE

Detail-oriented and motivated Data Analyst with a strong academic background in computer science, eager to apply theoretical knowledge and analytical skills to real-world scenarios. Proficient in data analysis tools and techniques, including SQL, Python/R, Excel, and data visualization tools. A quick learner with a passion for problem-solving and a collaborative mindset, seeking an opportunity to contribute to a dynamic team and gain hands-on experience in the field of data analysis.

PROJECT

● HOSPITAL MANAGEMENT SYSTEM

The Hospital Management System is designed to streamline the management and operations of a hospital or healthcare facility. It allows for efficient handling of patient records, appointments, staff management, inventory management and more.

Technologies Used:

- Python (for backend logic and scripting)
- MySQL (for database management)

● Key Features:

1. **Patient Management:**
   - Register new patients with details such as name, age, gender, contact information, and medical history.
   - Update and delete patient records as needed.
   - Search for patients based on various criteria.

2. **Doctor Management:**
   - Add new doctors with their specialization, contact information, and schedule.
   - View and update doctor information.
   - Assign doctors to patients and appointments.
